WARNING: READ BEFORE USING YOUR PLAYSTATION® GAME CONSOLE.

A very small percentage of individuals may experience epileptic seizures when exposed to certain light patterns or flashing lights. Exposure to certain patterns or backgrounds on a television screen or while playing video games, including games played on the PlayStation game console, may induce an epileptic seizure in these individuals. Certain conditions may induce previously undetected epileptic symptoms even in persons who have no history of prior seizures or epilepsy. If you, or anyone in your family, has an epileptic condition, consult your physician prior to playing. If you experience any of the following symptoms while playing a video game – dizziness, altered vision, eye or muscle twitches, loss of awareness, disorientation, any involuntary movement, or convulsions – IMMEDIATELY discontinue use and consult your physician before resuming play.

WARNING TO OWNERS OF PROJECTION TELEVISIONS:

Do not connect your PlayStation game console to a projection TV without first consulting the user manual for your projection TV, unless it is of the LCD type. Otherwise, it may permanently damage your TV screen.

USE OF UNOFFICIAL PRODUCT:

The use of unofficial products and peripherals may damage your PlayStation game console and invalidate your console warranty.

- Do not bend it, crush it or submerge it in liquids.
- Do not leave it in direct sunlight or near a radiator or other source of heat.

SETTING UP:

1. Set up your PlayStation game console according to the instructions in its Instruction Manual. Make sure the power is off before inserting or removing a compact disc.
2. Insert the IN COLD BLOOD disc and close the Disc Cover.
3. Insert game controllers and turn on the PlayStation game console.
4. Follow on-screen instructions to start a game.

CHANGING DISCS:

At the end of disc 1 of IN COLD BLOOD, a screen will appear instructing you to insert disc 2. **WITHOUT** turning the console OFF, open the disc cover and replace the disc currently in use with the next disc. Close the disc cover and continue on your journey.

OBJECTIVES:

IN COLD BLOOD is an adventure set in the memory of MI6 agent John Cord. Captured and tortured by enemy agents, he is weak and fighting for his sanity. All he knows for sure is that he was betrayed – if only he could remember by whom or why. Your adventure begins as Cord tries to piece together the fragments of his memory. You must reconstruct the events that led to Cord's capture, and use the information to make sense of his current situation as he languishes in a cell somewhere behind enemy lines. But if you're going to help Cord, you'll have to start acting like an MI6 agent; think like one, fight like one; and above all, survive. Use stealth wherever possible to avoid raising the alarm.

You're no use to us dead.

CONTROLS:

If you are using a DUALSHOCK™ analog controller, this game can be played using the directional buttons or the left analog stick. When using the left analog stick, ensure the ANALOG mode button is on (the mode indicator will light up Red). PLEASE NOTE: The vibration function of the DUALSHOCK™ analog controller is not supported in this game.

1. DIRECTIONAL BUTTONS – MOVEMENT:

In this manual, ↑, ↓, ← and → are used to denote the direction of both the directional buttons and the left analog stick. These are the default controls. You can reconfigure the controls of the left analog stick of the DUALSHOCK™ analog controller to your preferred settings via the CONTROLLER CONFIGURATION option in the OPTIONS menu.

There are two different "modes" of movement in this adventure: "Character-relative", in which the directions are in relation to the direction the character is facing; and "Screen-relative", in which the directions are relative to the location onscreen.

CHARACTER RELATIVE MODE (digital or analog modes):

- Press **↑** to walk forward. If pressing **R2** button, Cord will run forward.
- Press **←** / **→** to turn. When holding down the **L1** button, Cord will side step.
- Press **↓** to step backwards.

SCREEN RELATIVE MODE (analog mode):

- Press **↑** to walk into the screen.
- Press **←** to move to the left of the screen. Hold the **L1** button and press **←** relative to Cord's screen position and Cord will side step left.
- Press **→** to move to the right of the screen. Hold the **L1** button and press **→** relative to Cord's screen position and Cord will side step right.
- Press **↓** to walk out of the screen. Hold the **L1** button and press **↓** relative to Cord's screen position and Cord will step backwards.

2. BASIC ACTIONS:

⊗ BUTTON - INTERACT:

- Interact with objects.
- Confirm / accept menu selections.
- Examine objects.
- Use the Remora on computer consoles.
- Talk to people.

Use the **X** button to explore the environment. Useful items might be concealed inside crates, on shelves or obscured in some way. Cord can also explore the bodies of terminated enemies. Simply hold down the **L2** button to make him crouch, then press the **X** button to search.

△ BUTTON – INVENTORY

- Open / Close the inventory in the bottom left corner of the screen.
- Exit menus.

START BUTTON – PAUSE

- Pauses the game and opens up the PAUSE menu (see later on in this manual for more information).

3. MOVEMENT AND STEALTH:

Cord has three ways of moving around: his usual walk, which gives him time to respond to threats; running, which is swift but noisy; crouching, which is slow but stealthy. Evaluate the situation and choose the most appropriate.

L1 BUTTON – SIDE STEP

Pressing the directional buttons will cause Cord to side step.

L2 BUTTON – CROUCH

Pressing the direction buttons will cause Cord to creep around.

This is useful when sneaking up on Guards.

R2 BUTTON – RUN

Pressing the directional buttons will steer Cord as he runs.

4. COMBAT:

Cord should try to avoid combat wherever possible – he may be a trained agent but he isn't bullet-proof and he is only one man. Sometimes, however, it is unavoidable. His two methods of dealing with threats are silent, short-ranged unarmed combat attacks and using his sidearm where stealth isn't important or is not appropriate. Deliver a knock-out martial arts blow by hitting the attack button; use the gun by first pressing and keeping down the arming button, then hitting the attack button. Cord's gun has limited ammunition so be careful and always remember to check guards' bodies for reloads and medical boost packs. Provided he has additional clips, Cord will automatically reload his gun when he runs out of bullets. Reloading takes time and you might consider that it is better to reload from the inventory by selecting the clip icon and pressing the  button, although this wastes any bullets in the current cartridge. Note that Cord can carry a maximum of five clips and will not be able to take more from dead guards. In this case it is worth considering returning to the guard when ammunition runs low later in the mission.

⦿ BUTTON – ATTACK

- If pressing the **R1** button, Cord will fire his gun, if enough ammo is available.
- If not, pressing the **R1** button, Cord will punch.

R1 BUTTON – ARM / DISARM

- Pressing the **R1** button will make Cord take out his weapon; releasing the **R1** button, Cord will replace his weapon.

While in armed mode, the following is displayed:

- Health bar. This shows how much damage Cord has sustained. Health can be restored by using a medical boost pack. This is done by selecting the boost pack in the inventory and pressing the  button.

- Number of bullets in the gun. Each time a clip is changed, nine bullets are loaded into the breach.
- Number of spare clips. Each clip holds nine bullets.

If Cord is speaking to someone and is not getting the desired answer he can threaten them by talking to them while armed. Just remember not to fire, or getting an answer may be difficult... impossible, even.

5. THE REMORA:

The REMORA is Cord's wrist mounted communications and data storage device.

Ⓢ BUTTON

- Press the Ⓢ button to activate the REMORA device. The default display is the motion scanner. This displays the area around Cord specifically tracking humans and robots.

The motion scanner detects:

- People – displayed in blue (dark blue when dead).
- Robots – displayed in orange (dark orange when destroyed).
- Recharge points – displayed in dark green (light green when EMP mine inserted).
- Doors – displayed in orange.

Once the REMORA is active, the following options can be selected by pressing the ⊗ button:

- **Infra Red link:** This prompts the REMORA to search for a computer with an IR device with which to interface. If a computer is in range then it will be interrogated by the REMORA and the available options displayed. If Cord interacts with a computer console then the IR link will be automatically triggered. Enemy computers can provide information which is vital to success in the mission.
- **Database:** The database holds the mission objective and information that Cord has about a range of subjects. As more information is discovered, the database is automatically updated. Don't confuse the Volgian database which is accessed through the IR link (shows the communications symbol in the right corner), and the REMORA's own database (shows the heart beat symbol in the right corner).
- **REMORA communications:** This prompts the REMORA to search for compatible REMORA units. It can only communicate with REMORA systems that are in range and turned on.

The REMORA

"I really need my REMORA right now. When the scientists first showed them to us we all laughed. 'It's like a big, fat watch,' one of the guys joked. 'The REMORA,' the scientist noted, somewhat sternly, 'is your life-line. This wrist-mounted gadget acts as both a database and hacking device, the name being an acronym for Remote Entry Mainframe Override and Recall Assistant.'

He went on to show us how we could use it to hack into 'Secure' computer terminals or any electronic device with an infra-red interface port. That way we could download information, steal data, track enemy operatives or just get a fix on our location. He also demonstrated how it can be used to communicate with fellow operatives; pass on information, call for back up, that sort of thing.

Back then I never thought I'd ever use one. Now I'm lost without it."

INTERACTION:

1. CONVERSATIONS:

During IN COLD BLOOD there'll be plenty of occasions when Cord will need to extract information from other characters. In these instances, walk Cord over to the character and press the ⊗ button.

When it's Cord's turn to speak, a selection of discussion topics will appear at the bottom of the screen. Some of these might be specific people or they might be regarding objects or other events going on in the game, such as a football match. When selecting the discussion topic, it's worth remembering that some of the characters Cord will be talking to will be strangers. It's often much better to ease into the conversation gently before asking them directly about your mission. The subtlety with which you handle strangers can often make the difference between success and failure – ever thought of pointing your gun at someone to get them to co-operate?

2. USING THE INVENTORY

As with conversations, Cord's inventory is displayed at the bottom of the screen. Think laterally as some objects might seem useless, but are far from it. However, be resourceful; Cord only has limited storage space in his pockets so keep a check on what he's carrying.

The Briefing

" 'Above all, avoid conflict unless absolutely necessary'. That was the last thing they warned me. This wasn't an assault mission, I was to use stealth as much as possible. That meant that if there were enemies in my path I had to eliminate them as quietly as possible (a swift punch to the base of the neck usually did the trick). Only in the rarest of situations was I to use my gun; for one thing the sound might alert enemy agents nearby and then things would get really difficult. No, if I was to get anywhere I was to use my brain, not my gun.

Also, if at all possible I should try to get to know people. Just asking the right questions to the right people can often get me information that might prove crucial to my mission. Again, they warned me that only if a subject was proving particularly uncooperative should I resort to violence. We were, after all, supposed to be a peace-keeping operation."
